# IT Support Service Catalog

This catalog defines the IT support tiers available to Northwind Analytics, Inc. employees, including target response times and escalation paths for both corporate and manufacturing environments.

## 1. Support Tiers

| Tier          | Examples                                         | Target First Response   | Target Resolution |
|---------------|--------------------------------------------------|-------------------------|-------------------|
| P1 — Critical | Production line down, company-wide system outage | 15 minutes (24/7)       | 4 hours           |
| P2 — High     | Single department outage, VPN unavailable        | 1 hour (business hours) | 1 business day    |
| P3 — Standard | Password reset, software install request         | 4 business hours        | 2 business days   |
| P4 — Low      | General how-to questions, minor requests         | 1 business day          | 5 business days   |

## 2. How to Reach IT Support

- IT Service Portal (self-service ticketing, all priority levels): [portal.northwindanalytics.internal](https://portal.northwindanalytics.internal)
- IT Helpdesk phone line, extension 5100, for P1/P2 issues.
- Manufacturing floor: dedicated OT/Production Support line, extension 5199, for production-system issues, staffed 24/7 during production shifts.

## 3. Manufacturing Production Support

Given the direct cost of production downtime, any support request tagged as affecting an active production line is automatically treated as P1 regardless of the requester's initial priority selection, and pages the on-call OT support engineer directly.

## 4. After-Hours Support

P1 issues are supported 24/7 across all sites. P2-P4 requests submitted outside business hours are queued and addressed at the start of the next business day, except for manufacturing production support per Section 3.
